

CAPABILITIES STATEMENT

American Advanced Technologies (AAT) is a dynamic and versatile technology service firm providing a comprehensive solution for your technology needs. Our key differentiator is that we deliver based on “LEAN Before IT” to produce IT solutions aligned closely to your processes. AAT is committed to providing you with scalable technology services in the domain of Healthcare, Security, IT Software, and Infrastructure related to the Cloud, migration to the cloud, Business Intelligence ,and AI.

With a deep understanding of federal and state government processes, AAT prides itself on delivering professional, cost-effective and sustainable solutions based on Six Sigma, Agile, ITIL ,and PMP. We work with your teams to ensure the success of your initiatives, thereby supercharging your value streams!

Our Approach

Our approach modernizes our clients’ business model into a modern, agile, and competitive digital business model. The goal is to achieve the digital transformation that results in competitive advantages and to analyze the current state and formulate a future state together with you. We focus on transforming how organizations

- (1) Use data to gain valuable insights and become more predictive and less reactive to customer and market changes.
- (2) Execute business processes and transactions so that they are faster, effective, efficient, and less error-prone.
- (3) Assess and manage technical debt and modernize technology assets to align with the business’s goals.

Offerings and Services

Digital transformation of the organization’s business model is a top priority for Government and private business leaders that rely on technology and best practices to increase customer value and increase competitive advantage in a rapidly evolving, and dynamic digital marketplace. We specialize in designing and implementing digital transformation strategies that achieve these Key Process Indicators, and focus our services in the following areas:

Machine Learning & Data Analytics MLDA

MLDA is designed to give our clients access to the latest techniques, tools, and capabilities that deliver actionable insights to improve their business. Uniquely MLDA services are offered on a fixed scope, deliverable-based project basis where we transfer the risk from you to our firm.

Robotic Process Automation (RPA) and Process Transformation.

For organizations seeking incremental or transformational improvements to their business model, we offer business process transformation services designed to improve the productivity of internal resources and improve the accuracy and efficiency of conventional legacy business processes.

Managed Services

Our primary expertise is in Support, Cloud Infrastructure, Data Analytics, SaaS.

Our Experience

The founders of the AAT have vast experience in software development and implementation in government and private domains. Pravin Raikar has Medical Device engineering, E-commerce, Automotive Software, Cloud-based solutions, Warehouse Management, Government, Banking, Big Data. Dr. Kenneth Lee is a dynamic leader with 27 years of combined federal, state, and military service as a conscientious project manager leading various programs. Along with the founders, AAT consultants and specialty experts are highly qualified in the field of Technology Infrastructure, Networking, Product Development, Quality and Business Transformation.

AAT is a self-certified veteran-owned firm; **SDVOSB** certification has been applied. We look forward to serving your needs.
